

FAA's
Sport Pilot Certificate /
Light Sport Aircraft Category (LSA)

**SPORT PILOT/LIGHT-SPORT AIRCRAFT RULE:
QUICK ANSWERS TO COMMON QUESTIONS**

Summary of Light Sport Aircraft (LSA) Rule for Sport Pilots: A new class of simple-to-fly aircraft that meets the following definition:

The Aircraft:

STOL CH 750

ZODIAC CH 650

NEW
Video Clips

- Maximum gross takeoff weight: 1,320 lbs.
- Maximum stall speed: 51 mph (45 knots)
- Maximum speed in level flight with maximum continuous power (Vh): 138 mph (120 knots)
- Two-place maximum (pilot and one passenger); single, non-turbine engine, fixed or ground adjustable propeller, fixed landing gear.

The following from [EAA](#) is a collection of brief answers to some of the more common Sport Pilot questions:

Aircraft:

- Non-LSA Aircraft: Holders of a sport pilot certificate may fly an aircraft with an existing airworthiness certificate if it meets the definition of a light-sport aircraft (such as weight and speeds). For example, an amateur-built [STOL CH 701](#) or [ZODIAC](#) aircraft may be flown by a Sport Pilot since the aircraft meet the definition.
- Can be factory-built under a new **Special Light-Sport Aircraft** (S-LSA) certification without FAR Part 23 compliance. Aircraft must meet consensus standards. Aircraft under this certification may be used for sport and recreation, flight training, and aircraft rental.
- Can be licensed Experimental Light-Sport Aircraft (E-LSA) if it was kit- or plans-built and operated as an ultralight trainers. Aircraft must be transitioned to E-LSA category no later than January 31, 2008.

The Zodiac Light Sport Aircraft (LSA), as featured on the cover of [EAA Sport Pilot & Light-Sport Aircraft](#) magazine.

The Zodiac... Have It Your Way. Ready-to-fly, ready-to-build, or IFR capable

by Dan Johnson (pages 24 - 31, 12/06 issue).

The Sport Pilot rule:

- Allow **sport pilots** to fly existing aircraft (standard airworthiness certificate) that meet the definition of a light-sport aircraft.
- Creates a new **student sport pilot certificate** for operating any aircraft that meet the definition of a light-sport aircraft.
- Creates a new **sport pilot flight instructor** certificate.
- Requires FAA knowledge (written) and practical (flight) test.
- **Credits ultralight training** and experience toward a sport pilot certificate.
- Credits sport pilot flight time toward more advanced pilot ratings.
- Requires either a **3rd class FAA medical** certificate or a **current and valid U.S. driver's license** as evidence of medical eligibility (provided the individual does not have an official denial or revocation of medical eligibility on file with FAA).
- Does not allow carrying passengers for compensation or hire
- Allows sharing ("pro-rata") operating expenses with another pilot.
- Allows **daylight** (civil twilight) flight only.

AMD manufactures the certified Light Sport Aircraft (S-LSA) at its production facilities located south of Atlanta in Eastman, Georgia.

August 2008: **Zenith introduces the STOL CH 750 light sport utility aircraft**

"The Chris Heintz-designed STOL CH 701 is a workhorse. It has been performing short takeoff and landing (STOL) duty for 20 years and has developed a cult following. Its big brother, the STOL CH 801, is a lot bigger, with twice as many seats and room inside," reported EAA Sport Pilot magazine (October 2008). "So, with small and large STOL machines, what else would Chris Heintz fans want? How about a mid-sized S-LSA STOL machine? They have one: the new STOL CH 750."

Zenith Aircraft Company's amateur-built kit STOL CH 701, the new STOL CH 750 and the new ZODIAC CH 650 designs should be eligible for operation under the new rules. However, Zenith Aircraft Company cannot guarantee that kit aircraft, as constructed by the builder, will be eligible for operation under the new category.

Light Sport Aircraft for Sport Pilots

Already, the STOL CH 701 and the ZODIAC CH 601 can be licensed in Canada and in Europe under "Advanced Ultralight" rules, where some are used for flight training. Based on the market demand, plans are being made to offer assembled aircraft as allowed under the new rules.

If I become a sport pilot, what can I fly?

An aircraft that meets the definition of a light-sport aircraft may hold an airworthiness certificate in any one of the following categories of FAA certification:

- An experimental aircraft, including amateur-built aircraft (such as the ZODIAC or STOL CH 701, for which the owner must construct more than 51-percent of the aircraft.
- A standard category aircraft; that is, a ready-to-fly aircraft that is type-certificated in accordance with FAR Part 43.
- A Primary category aircraft; that is, a ready-to-fly aircraft that is type-certificated in accordance with Primary category regulations.
- A factory-produced "special" light-sport aircraft (S-LSA)
- An experimental light-sport aircraft. (E-LSA)
